SEARCH

The Search command allows you to perform a search on PDF documents. You can search for a simple word or phrase, or you can expand your search query by using wild-card characters and operators. You can use the search options to further refine your search. And if document and date information were provided for the documents you are searching, you can use that information to narrow your search.

Searching a full-text

Type the text you want to search for in the Find Results Containing Text box: The text that you type in can be a single word, a number, a term, or a phrase. It can be a word, with or without wild-card characters (*, ?), or any combination of letters, numbers, and symbols. Because you can use Boolean operators in the text box, you must enclose any search term that includes and, or, or not in quotes. You can also use the operators =, ~, and! = with text, but only to perform exact matches, contains, and does not contain searches, respectively. You can use comparison operators (<, <=, >, >=) with values of the same type. For more information, see Tips on defining search queries. To clear the search dialog box and redefine the search, click Clear.

The Search dialog box is hidden, and documents that match your search query are listed in the Search Results window in order of relevancy.

Double-click a document that seems likely to contain the relevant information, probably the first document in the list. The document opens on the first match for the text you typed.

Click the Search Next button or Search Previous button to go to other matches in the document. Or choose another document to view.

Search Options

Word Stemming finds words that contain part of (a word stem) the specified
Help Menu on Major Links

search word. It applies to single words, not phrases; does not apply to words that contain
wild-card characters (*, ?); finds words that end in ing, ed, s, ion, and so on, but not er;
and cannot be used with the Match Case option. Word Stemming works only for indexes
built with this option.

Sounds Like finds different spellings for proper names. It applies to single words,
not phrases; does not apply to words that contain wild-card characters; and cannot be
used with the Match Case option. Sounds Like works only for indexes built with this
option.

Match Case limits the results of the search by finding only those documents that
contain words with the same capitalization. It can be used with a Boolean expression and
with terms that use wild-card characters. Characters matched by wild-card characters can
be either uppercase or lowercase.

Proximity limits the results of simple AND searches to one pair of matches per
document—the pair closest together. The two matches must be within three pages or
fewer of each other. This option is useful for locating a document that concentrates on
some topic of interest.

Left Arrow Pointer  (←)
By pressing the left arrow pointer it goes back to Previous Page.

Right Arrow Pointer  (→)
By pressing the right arrow pointer it moves to Next Page.
